Statement of Crisa's Environmental and Energy Policy

Crisa, company dedicated to the design and manufacturing of electronic systems and software for space applications, states its commitment to protect the Environment, fight Climate Change, as well as to optimize and use energy efficiently, by designing products, services and processes respectful to it, minimizing both the direct impact that may result from our activities, as well as the indirect impact caused by our suppliers and subcontractors.

Fulfilling this commitment is a basic and fundamental objective of the Management and all employees of the company.

In order to honor our commitment, Crisa has established at all levels of the organization a set of regulations in environmental and energy matters to enable us to meet current applicable legal standards, internal company requirements, demands of clients and other interested parties, and company objectives and goals.

Likewise, the company commits itself to provide all the means at its disposal to try to achieve the compliance of objectives and goals. This policy will also enable us to foresee and diminish harmful or negative environmental repercussions, as well as our Carbon Footprint, through reduced consumption of energy resources and raw materials, by engaging, wherever possible, in the use of renewable or recycled resources.

Crisa intends to achieve these goals through the following measures:

- Designing products, which are safe and energetically efficient, can be safely installed, operated and uninstalled, and can be recycled or disposed in a respectful way to the environment.
- Training and education to heighten the awareness of all persons involved concerning the fulfillment of the established environmental and energy objectives
- Allocation of personnel and means for control in various services, systems and processes. Periodical revision of Systems, Corrective Actions undertaken, and Goals and Objectives.
- Careful management of wastes generated through various services, systems and productive processes
- Prevention of contamination caused by Crisa's products, processes and services
- Supervision of purchases of products and services, supporting the acquisition of energetically efficient products, in order to improve our energy performance

In this way, we embark on a day-to-day continual improvement process that will lead to a more efficient energy performance and to a sustainable development respectful to the environment.
